
Energy quality on each controller’s own closed-loop trajectories
2 × 2 network (upper-tail zoom)
2 × 2 network (upper-tail zoom)
3 × 3 network
3 × 3 network
Classical stochastic
QAOA
Fraction of decisions
Truncated y-axis: 0.985 to 1.0005
Energy gap
Energy gap / |E_{min}|
12,000 decisions per controller/grid; pooled ECDFs are descriptive, not independent replications.
Different visited states: these curves do not establish matched energy-gap distributions.
