

QAOA Noise Sensitivity — Traffic Performance (3×3 Grid, $\alpha = 0.7$)

—●— Avg Travel Time (s)
 —●— Avg Waiting Time (s)
 ◆ Ideal / no noise

Noisy conditions are means across n=10 independent simulation runs per condition; the ideal/no-noise reference uses n=20 independent runs. Error bars show 95% confidence intervals across runs, not across individual QAOA decision epochs.
